INTRODUCTION TO THE PHYSICS OF STELLAR INTERIORS ASTROPHYSICS AND SPACE SCIENCE LIBRARY

Springer. Paperback. Book Condition: New. Paperback. 117 pages. Dimensions: 9.4in. x 6.3in. x 0.3in. All astrophysicists are acquainted with the fundamental works of S. Chandrasekhar⁶ and M. Schwarzschild¹ concerning the internal structure of stars. Although both of these works accentuate the principal mathematical devices of the theory (and use, for this reason, notations that are rather perplexing for the non-specialist), the work of Schwarzschild is distinguished by care in demonstrating the physical meaning of the principal equations, while that of Chandrasekhar makes every effort not to skip a single step in the calculations. On the other hand, Schwarzschild, who considers his two introductory chapters as simple reviews of results which are already known, passes a bit rapidly over certain difficult arguments, and Chandrasekhar never goes far enough in the analysis of the physical mechanisms involved. From another point of view, the excellent review articles published in the Encyclopedia of Physics⁵ by M. H. W. R. P. Ledoux, and others, and those published in Stars and Stellar Systems⁴ by H. Reeves, B. Stromgren, R. L. Sears and R. R. Brownlee, and others, are principally intended for research workers who are already initiated into the theory of internal structure. These monographs are on a level that is clearly too high for the general physicist who is approaching these astrophysical questions for the first time, and more particularly for the post-graduate student. This item ships from multiple locations. Your book may arrive from Roseburg, OR, La Vergne, TN. Paperback.
