Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Field Evaluation of Anaerobic Denitrification in Simulated Deep Ponds In 1957, the State Legislature authorized the San Joaquin Valley Drainage Investigation. The purpose of this investigation is to resolve the agricultural waste water disposal problems of the San Joaquin Valley. As in most areas in which irrigated agriculture is practiced, the drainage problems have been handled on a local scale. The beginning of the Drainage Investigation indicated that drainage was finally being thought of as it should as a problem for the whole basin, and not a problem of just the unfortunate few. Several phases of the quality and treatment studies of the San Joaquin Valley Drainage Investigation are of such a nature that they merit special publication. For this reason a special series of bulletins, all with the same basic number 174, has been created under the general heading of Bio-Engineering Aspects of Agricultural Drainage. Bulletin 174-3, the third of the series, is a field evaluation of the anaerobic denitrification process in simulated deep ponds. The work, done is part of the Interagency Nitrogen Removal Treatment Project, and was conducted at the Agricultural Waste Water Treatment Center near Firebaugh, California. The project was designed as an intermediate field step between the laboratory studies, described in the Appendix, and the pilot-scale field studies. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or...
