Not illustrated. 1880 Excerpt: .the total number of noughts and figures after the first number. Thus, 8.5 x 10 is known at once to be 8 followed by 6 figures, the first of which is a 5 and the rest noughts. Page 49. f Thus, $10 = 10 \times 10 = 100$, $10^- = 10 \times 10 \times 10 = 1000$, and so ou. In this system of notation the earth s magnetic moment is written $855 \times 10^-$ which is a much more convenient number both to write and read than the row of noughts above. It shows that the decimal point is to be moved 25 figures to the right. Long decimals are expressed in a similar way, only the index is written with a negative sign. A negative index means that the number is to be divided by 10 that number of times. Thus, 855×10^{-4} means a decimal which, if written in full, is 0-00000855 It shows that the decimal point is to be moved 6 figures to the left. Units.--Intensity Of Magnetization. Let us imagine a quantity of a substance all uniformly magnetized, and let us cut any bar out of it and determine its magnetic moment. Let us now, leaving the section of the bar the same, double its length. We shall double its magnetic moment, because, leaving the strength of the poles the same, we have doubled the arm of the couple. In doubling its length we have doubled its volume. Again,...
